

Phishing Log Review - PBQ Answer Key

1. Employees Who Clicked the Phishing Link: 25 employees

Determined by counting connections to `secure-credential-update.company-portal.com` in the email server logs.

2. Workstations Infected: 15 workstations

Verified through SIEM Event ID 4688 (New Process Created) across 15 unique internal IP addresses.

3. Malware Executable Name: `svchost.exe`

Identified in SIEM logs as the suspicious spawned process following browser activity.
